

With gradually increasing number of SMEs institutionalized, the corporates pay attention to become more insensitive to time, labor and document management costs. This causes to raise demands and needs which will increasingly grow the market in terms of optimization of workflow processes and internal and external corporate information sharing.

Logo Flow is a workflow management system which converts inputs into useful outputs getting them through various phases, allows the business processes to be designed and operated, and enables information about approved, refused or ongoing business processes to be monitored. It offers the optimum solution for all SMEs and institutional enterprises which wish to organize their business processes in more simple and systematic structure and aim to convey internal / external corporate information accurately, safely and rapidly.

Logo Flow comprising of several modules from customer relations management to supply chain process and from finance management to foreign trade accelerates the communication between different departments. Thus, it transfers into electronic environment several processes in production, planning, logistics, finance and administrative fields in a short time.

Logo Flow presents a structure in which form and flow design is supported through a single interface and simple workflows can be performed by less-experienced users too. Forms to be displayed on web interface and flow designs to be created can be performed by drag-and-drop method without the need for coding knowledge.

Make a Difference with Logo Flow

Logo Flow which is put into use by Logo's product development teams skilled in workflow distinguishes with the promise of "making a difference for its users".

Why Logo Flow?

Easy access from anywhere

Ability to design forms without the need for coding

Instant notification

Integration with Logo ERP Solutions

Ability to monitor the workflow statuses (dashboard)

Plug-and-Play form and flow design

Web Service support

Direct approval via e-Mail

Mobile interface

Android and iOS mobile application

Faster Workflow Management

With Logo Flow, it is possible

- to direct different transactions depending on the values within the form in terms of workflow design,
- to enable to record in Logo ERP solutions to display values for an entry recorded and to carry out related transactions easily.

In terms of workflows, a transaction carried out in flow or an entry made into database may enable a workflow to be triggered. It can be provided that works requested following any step of workflow are to be operated in parallel. Besides, in a certain step of the process waiting support can be provided or it allows designing so as to make the flow proceeded in differently according to the change of a value within the form.

With Logo Flow, the users are allowed to commence or proceed the workflow depending on their authorization through web interface opened for users access. By means of e-Mail support, the users are instantly informed about works assigned to them. Authorized users can display how many of the processes are completed, how many of them continue and how many of them are prescribed.

Which Requirements of Your Enterprise does Logo Flow Provide a Solution?
